

Social Story Coronavirus (COVID 19)

What do we know ?

- This is a new type of flu
- It can affect people differently , but scientists tell us younger people are least affected if they get it
- Symptoms may include; higher than normal temperature and/or dry cough
- A very high percentage of people make a full recovery and then are fine
- Schools may close to keep everybody healthy and safe. Miss Houghton will let parents and carers know when and if school will close and when we will re-open.

Helping to protect myself and others

To keep everybody healthy and safe I should wash my hands with soap and water for 20 seconds.

When should I wash my hands ?

Before I eat food

After I sneeze, blow my nose, or touch my face

After I go to the toilet

When I come in from being outside

When I am moving rooms around the school

When I come in from a public place

How else can I help?

Cough into your elbow

Tell an adult if you don't feel well

Avoid touching others

Avoid putting hands in your mouth/eyes/nose

Just like other types of flu, Coronavirus will go away.
